

**Helge Bremnes, Research Manager
Møreforskning (Norway)**

Areas of expertise:

Helge Bremnes holds a master's degree in economics from the University of Bergen. His broad research interests include industrial economics, cluster analysis, cost-benefit analysis, evaluation of public R&D policy, incentive mechanisms, and market design. Bremnes has participated in several projects related to cost-benefit analysis of different research infrastructures and is a member of one of the seven consortiums that the Ministry of Finance selects to perform quality assurance (KS1) of large public projects. In recent years, his research has been concentrated around one of the critical challenges of the 21st century: sustainable industrial change. One line of this research focuses on how socio-economic trends are driving change and innovation in crucial industries in Møre og Romsdal, like the marine-, maritime- and tourism industry. Another line of this research focuses on policy implementation, especially R&D policy, and its connection with industrial change income.

Industrial economics, cost-benefit analysis, cluster analysis, maritime and marine sector, social sciences, Ocean Seaweed Center.
